

# Brackets

*How did the value blow up with such a short expression?*

Run the Python 3 file `brackets.py`. You need Python 3.5.1+.

Please treat the file as a black box. For your enjoyment, do not inspect the source code of the file. (In a more serious hunt, this file would be hosted server-side and solvers would only be able to interact through a webpage.)

These instructions are not part of the puzzle.
